

**OPIFICIO CERAMICO PRESENTS ITS NEW FORATINI AND ÉCLATS COLLECTIONS
AT CERSAIE: MATERIAL, GRAPHICS AND ARCHITECTURAL EXPERIMENTATION**

Modena, September 2026 – On the occasion of the new edition of Cersaie, Opificio Ceramico unveils two new design proposals exploring the expressive, material and geometric possibilities of ceramic surfaces: the **Foratini collection**, designed by **Marco Spatti**, and the **Éclats collection**, the result of the company's in-house research.

Foratini (Design by Marco Spatti)

Inspired by traditional clay bricks, Foratini reinterprets the modular elements of architecture through a contemporary and decorative lens. Characterised by small holes across its surface, the collection becomes a true compositional language articulated through four square tiles, each distinguished by a different graphic pattern: **Pieno**, **Riga** (two lines), **Quattro** (four dots) and **Uno** (single central dot).

Once installed and grouted, the holes integrate with the joints, transforming into patterns, rhythms and geometric compositions that can be used to create contemporary boiserie, dynamic surfaces and continuous wall coverings.

- **Material:** Glazed porcelain stoneware
- **Size:** 12.3 × 12.3 cm
- **Textures:** Pieno, Riga, Quattro, Uno
- **Colours:** Bianco, Mattone, Greige, Verde Muschio
- **Recommended grouts:** 8 selected shades from the Mapei range (622 Desert, 614 Light Ash, 133 Sand, 609 Rock, 618 Brick, 610 Dust, 619 Clay, 606 Dolphin)

Éclats (Opificio Ceramico™)

The **Éclats** collection (“fragments”, “shards”) originates from the combination of coloured minerals and glass granules, hand-applied to a coloured ceramic clay base. The multicoloured flakes, featuring different sizes and shades, fuse with the clay during firing at **1.200°C**, creating a three-dimensional, highly resistant surface with no surface glaze and an aesthetic that lies somewhere between terrazzo, Venetian *battuto* and granite.

The three-dimensional research is further developed through **ARC**, a curved slender element designed to clad rounded surfaces, columns and architectural elements.

- **Technical performance:** R10 slip resistance (UNI EN), frost-resistant and stain-resistant, suitable for indoor and outdoor applications, including wet environments
- **Sizes:** 5.3×22 cm, 22×22 cm and three-dimensional ARC element
- **Colours:** Ivoire, Dune, Cacao, Brique, Mousse
